DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-22 and 33-41, drawn to implantable cardiac pacing systems, classified in class 607, subclass 27.
 - II. Claims 23-32, drawn to a method of finding an optimal AV delay for use in an implantable pacemaker in an A-V synchronous mode, classified in class 607, subclass 28.
 - III. Claims 42-52, drawn to a method and computer readable medium for testing to determine the optimal value of an operating AV delay for use in a cardiac pacing device, classified in class 607, subclass 25.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practice by another materially different apparatus, such as one that includes a means for obtaining an instability response for each cardiac cycle during a predetermined duration and based on the instability response, calculating a metric.

3. Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as to set an optimal cardiac pacing rate based on the results obtained by the testing means. See MPEP § 806.05(d).

4. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as to deliver pacing stimulus to the heart based on the instability response. See MPEP § 806.05(d).

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
